

ORamaVR

Press Release

November 6, 2017

OvidVR is now ORamaVR

A visionary medical education system, in VR.

ORAMA Means Vision In Greek.

We are rebranding to better express our vision for the future of medical education and to reflect our ambition to grow in the surgical training space.

Our vision is to enhance medical education through Virtual Reality (VR). Our mission is to transform surgical outcomes with cutting edge technology. Our goal is to prepare medical personnel for lifelike scenarios and to support them in excelling as operating surgeons.

ORamaVR is set to transform medical training to be cost-effective, broadly accessible and enable skill transfer from the VR to the Operating room (OR).

Our founding and on-boarded team is devoted to our goal of utilizing VR technology, to meet societal needs for better medical outcomes.

We invite you to experience our VR operations in the comfort of your home or office. Contact us to schedule a demo.
